Promise Olaifa

Product Designer · Fintech, marketplaces and logistics · Designs in Figma, builds in code

Lagos, Nigeria (GMT+1), open to remote · olaifapromise1@gmail.com · omoniyiux.vercel.app · LinkedIn

SUMMARY

Product designer with 4+ years designing mobile apps, web platforms and internal tools for Nigerian businesses in marketplaces, fintech, logistics and insurance. Sole designer on Quote Request, ConnectNigeria's services marketplace: customer app, vendor app and web app, with the first version designed in two weeks and live since November 2025. Research-led, comfortable owning a problem from user interviews to handoff, and able to build what I design in React and Next.js.

EXPERIENCE

Product Designer, ConnectNigeria

Jan 2023 to present · Lagos · Full-time

Nigeria's business information platform: SME directory, editorial tools and Quote Request

- Sole designer on **Quote Request**, a two-sided services marketplace: designed the customer app, vendor app and web app (iOS, Android, web) with a PM and three engineers. Designed v1 in two weeks; live since Nov 2025 with 1,000+ Android installs and a 4.6 rating on Google Play.
- Designed a guest-first request flow: four short steps (job, date, budget in naira, location), with the account asked only at submit and the draft kept, so visitors describe their problem before committing.
- Designed vendor trust and payments: business confirmation with CAC registration, reviews tied to confirmed jobs, and plan checkout by card (Paystack) or bank transfer with discount codes, referrals and loyalty points.
- Iterated the product after launch using feedback from users and the sales team; designed and built 28 lifecycle email templates in React Email.
- Redesigned the business directory, after which bounce rate fell 30%; built a 200+ component Figma library used across the team's products; ran 150+ user interviews with SME owners and directory users.

Product Designer, LeftLane Tech

Mar 2022 to Dec 2023 · Texas, USA · Remote

- Designed interfaces for 5 client projects in fintech and SaaS, with an average client satisfaction score of 4.8/5.
- Ran usability tests with 100+ participants and fixed 15 UX issues, raising task completion by 55% across tested flows.

Contract projects

2023 to 2025 · alongside the roles above

- **Vigoride** (2024 to 2025): designed the customer app, rider app and marketing website for a Nigerian on-demand delivery platform, live at vigoride.net.
- **Eonsfleet** (Mar to Dec 2023): redesigned the vehicle tracking interface for fleet operators, cutting new-user training time by 45%.
- **Tangerine Africa** (2023): designed an in-app tool for field agents to register and insure customers on the spot (ID capture, plan selection, policy confirmation), built for low-connectivity areas.

SELECTED SELF-INITIATED WORK

Moniepoint: getting locked-out customers back to their money. From 520 Google Play reviews: about one in five of 2026's negative reviews came from people who couldn't get into the app. Separated design causes from engineering and policy ones, then designed the parts design owns plus three quick wins.

Bayse: 10 fixes for a prediction market. Used the app for a week as a real trader, found 10 problems between users and a trade (including a buy flow that let people review orders they couldn't afford), and redesigned each one.

Lumino. Smart-lighting app designed in Figma and built in React with spring-physics motion, to test how controls feel in real code.

SKILLS

Design: product design, UX research, user interviews, usability testing, interaction design, design systems, prototyping, UX writing

Domains: marketplaces, payments and checkout, onboarding and KYC, low-connectivity UX, field-agent and fleet tools, SME tools

Tools and code: Figma, Framer, HTML/CSS, JavaScript, React, Next.js, Tailwind, AI-assisted development with Claude Code

EDUCATION

B.Tech, Computer Science, Ladoke Akintola University of Technology

Ogbomoso, Oyo State
